

TECHNICAL DATA SHEET

200 litre RainCatcher designer Wall Mounted Water Butt

200 L	Designer Wall Mounted Water Butt with fixing kit and black tap
Dimensions	High 115 cm, 115 cm wide, depth 20 cm
Weight	Approx. 18KG
EAN	Black= 5060166290696
Colour	Black or Green
Material	Recycled plastic

	Resistant to UV
	Strong and durable
	Robust for outdoor use
	Child Safety Lid
Weight	Approx. 15kg
Country of Origin	Designed and Made in the UK by RainCatcher
	Minimal maintenance
	Slim line / space saving
	5 ingress and egress ¾" connections
Optional Extras	Downpipe filter diverter, brass or chrome tap, submersible or surface pump for water delivery, 5050 slow release valve kit for attenuation of flood water, linking kit for multiple tank

Raincatcher 200 designer wall mounted water butt

Fact sheet

DIMS:	1150mm(wide)x200mm(Deep)x1150mm(Tall)
Weight:	20kg
Material(Black):	Fully recyclable plastic
Colours available:	Black and green as standard from stock Any colour for own label. MOQ 50 units

Description

The easy to install and low maintenance RainCatcher 200 litre is a unique and practical British made rainwater harvesting tank to aesthetically compliment any property, be it domestic, commercial or industrial for uses such as simple rain water storage, a form of storm water attenuation or as a full rain water harvesting system for the garden or home with the addition of water filtration and pumping equipment. Available as a 'plug and play' system, this can be further developed with a minimal effort to harvest rainwater for washing machines, flushing toilets, car washing, exterior washing, garden irrigation or lawn watering; especially beneficial during those long and increasingly often periods of hose pipe bans. Also suitable for use as a throttled attenuation for storm water management. All RainCatcher tanks are fully linkable with the addition of a simple linking kit, helping increase storage capacity for storm surge scenarios. The unique wall mounted, space saving, RainCatcher tank is a mere 200mm deep, thereby providing an unobtrusive method of storing rainwater for future use in the narrowest of spaces.

Growing awareness of SuDS (sustainable urban drainage systems) and the need for flood water alleviation, means far more interest is being placed on RainCatcher products, helping everyone adhere to sustainable water management whilst also tackling climate change.

This wall mounted tank is fully approved on the water technologies list with a full 100% capital allowance tax rebate available for commercial installations and also features:

- 5 quality brass ingress/egress points
- Quality removable lid allowing full access to the tank to place pumps or additional fittings
- Snap action tap (Included) with upgrade to chrome or brass optional
- Wall fitting kit (Included)
- Factory modifiable on request. I.E. Tap to the side/ special fittings etc

How does it work?

Rainwater hits the roof, goes in to the guttering and flows down the downspout, it will flow in to the Raincatcher rainwater filter diverter where the fine filter basket will remove impurities and then the rainwater will automatically flow in to the Raincatcher storage tank. When the tank is full, the rainwater fills the filter diverter partially up and automatically flows back down the same down-spout. The rainwater can be delivered to source through many methods as listed in our accessories or included in our full system packages.

Also available

- Internal pressure pump kit
- Plug and play direct or gravity feed kits for harvesting rainwater
- Brass or chrome taps
- Tank linking kit to add additional units
- Chlorine filter basket cage and fittings for disinfection in warm periods
- Roof collection tray to facilitate irrigation systems for green roofs or direct feed from flat roofs
- Throttled attenuation set

In order to fill the tank, you will need a filter diverter which is also available from our range.

Take advantage of nature's most precious resource that falls free from the sky and invest in a rain harvesting kit today. Saving your water, your environment and your money!

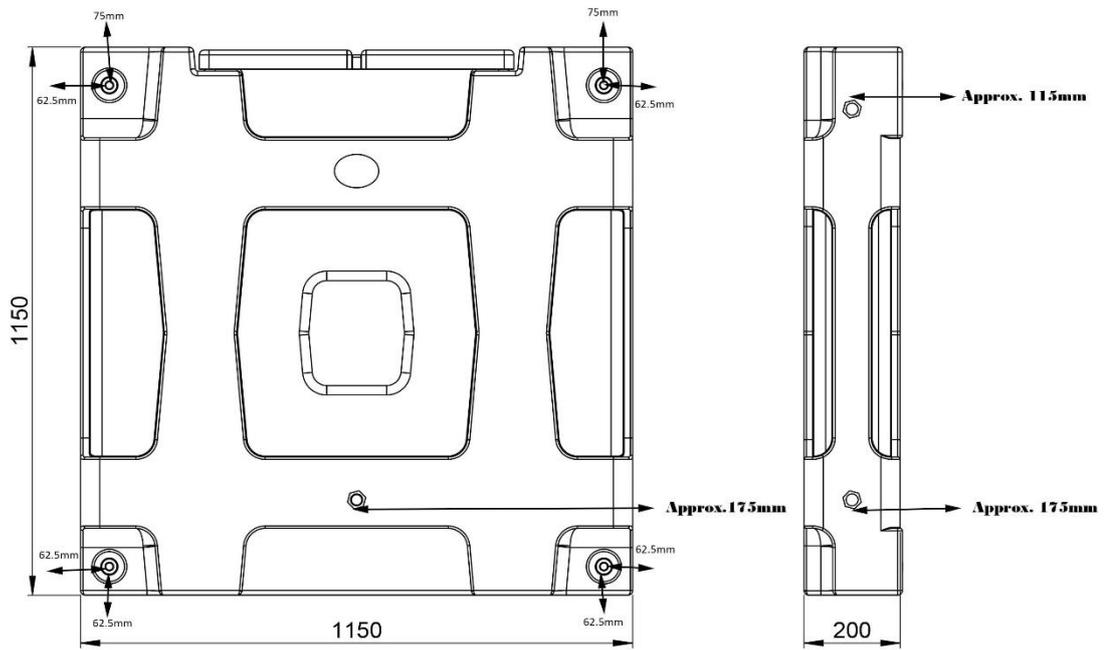

This product is available as an OEM product either with your company label attached or in your company colours as you require.
