Capacity - Gallons	65
Height - mm	2100
Length - mm	420
Width – mm	400
Construction Material	Polyethylene
Code	CH-SPACESAVER300DWT

## Description

The vertical water butt offers a convenient way to store water and save space. Their unique narrow design allows the water butt to be installed in areas where space is at a premium. The generous 300 litre capacity is perfect for collecting and storing rainwater for activities such as watering plants and washing a car.

The water butt comes pre-drilled for the plastic brass effect hose connector tap (included as standard - chrome or brass taps are available at an additional cost). This allows access for a watering can to be filled or a hose pipe to be connected. An optional extra (at an additional cost) is the RainCatcher filter and diverter fit which provides easy collection of rainwater from your drainpipe. This kit is suitable for drainpipes from 68-110mm and can be used as a simple diverter or as a filter for catching leaves and other debris. Another optional extra (also at an additional cost) is the 1 meter linking kit. This is specially designed to allow you to connect two water butts together instead of purchasing a larger capacity water butt.

### Features

- Slim design
- Pre-drilled for easy installation of the hose connector tap.
- Low maintenance
- Height: 2100mm
- Width: 420mm
- Depth: 400mm

### Included in the kit
