Capacity - Gallons	59
Height - mm	1050
Length - mm	790
Width - mm	410
Construction Material	Polyethylene
Code	3P900035KDWT

Description

This water butt offers a unique, sleek and compact design that is suitable for urban areas and contemporary style buildings and gardens. The generous 270 litre capacity is ideal for collecting and storing rainwater for activities such as watering plants and washing a car. Manufactured from rotationally moulded polyethylene, the product is strong and durable as well as weather resistant. Available in 3 colours, the water butt is sure to blend into surrounding areas.

The water butt comes pre-drilled with x3 ¾" brass threaded ports. One can be used to connect the tap which is included as standard (chrome for granite, brass for sandstone and charcoal) and the others can be used as a draining port or a connector can be attached to another water butt. Also included is a removable child safety lid making this product suitable for family homes.

An additional option (at an additional cost) for this product is the 3P Filter Collector with Universal Link Kit. This filter is everything you need for collecting water from your downpipe and filter any debris before transferring the water into the tank.

Features
